### About Us

---

Tayham Builders & Engineering is leading and reputed construction conglomerates in Bangladesh. A company for supplying of finished goods & all other works on contract basis. Tayham Builders & Engineering is a sister concern of Omi Steel & Corrugation Industry. The Company's skilled team by this time became professional & specialized in Bridges, Foundations, Heavy civil construction, Roads, Tracks, Food grain Silo and other related infrastructures. Since its inception, the company has completed a number of remarkable projects of various authorities in Bangladesh.

### Mission

---

Serving the clients with commitments, ensuring safety and value-added products, having "leadership with excellence" by upholding and maintaining reputation for quality, integrity and honesty, to the full satisfaction of our valued customers.

### Vision

---

Tayham Builders & Engineering is committed to being a Construction Conglomerate that is known for quality, integrity and commitment with resources and internally for profitability and employee satisfactions

## Design Team

---

A design team can be a singular individual working on design projects across an organization, up to a team of 50+ designers who have their own department.

There's a lot that goes into effectively leading a design team, but let's start with how you'd like to structure yours. There are three common structures you can follow: Centralized, cross-functional (also known as embedded) and flexible. Think of it like a design team organization chart that help to map out where designers sit within a given team.

## Architectural & Detailing Team

---

Architects create designs for new constructions, alterations and redevelopments. They use their specialist construction knowledge and high-level drawing skills to design buildings that are functional, safe, sustainable and aesthetically pleasing.

Architects stay involved throughout the construction process, adapting their plans according to budget constraints, environmental factors or client needs. As such, they operate as part of an overall project design team, working closely with a range of construction professionals from quantity surveyors to building services engineers.

Typical work activities include:

Creating building designs and highly detailed drawings both by hand and by using specialist computer-aided design (CAD) applications

Liaising with construction professionals about the feasibility of potential projects

Working around constraining factors such as town planning legislation, environmental impact and project budget

Working closely with a team of other professionals such as building service engineers, construction managers, quantity surveyors and architectural technologists

Applying for planning permission and advice from governmental new build and legal departments

Writing and presenting reports, proposals, applications and contracts

Specifying the requirements for the project

Adapting plans according to circumstances and resolving any problems that may arise during construction

Playing a part in project and team management

Travelling regularly to building sites, proposed locations and attend client meetings

For the most part an architect's working day will be office based. However, site visits and meetings with clients are frequent, so travel can figure prominently.

## Consultant Team

Tayham Builders & Engineering is the pioneers in Building consultancy services in Bangladesh and we can work for any places in Bangladesh. The consultants of Tayham Builders & Engineering Consultants have become preferred choice of leading Consultancy firms in Bangladesh. We are providing consultancy services to almost all functions. We have highly qualified, experienced and dedicated team of professionals who closely work with our clients for bringing maximum productivity from available resources.

## Strategy

We are reliable unit and qualified building surveyors specialized in building construction as well as repair, maintenance, alteration & additional works. We are well capable & experienced in delivering quality projects that meet our clients' expectations

## Design

We are an interdisciplinary design studio with works covering Architecture, Interiors, Graphics and Products. We have undertaken a great variety of projects.

We strive to bring the best to each project with creative design and innovative thinking. We are energetic and passionate about our work, and committed to creating sustainable and reliable spaces for our clients far exceeding their expectations.

## Global Coverage

Our large team of structural and technical specialists enable us to craft a workable solution to any technical issue in short order. This includes a feasible time frame and corresponding budget, and can cover anything from repairing technical malfunctions or defects, occupying or leaving buildings, drafting development plans or fixing reinstatement value.

## Construction

The success of your renovations or redevelopments demand an experienced team of project and general managers to orchestrate each phase in detail – one that supports all stakeholders in the process and leave nothing to chance. Since Tayham Builders & Engineering project managers are involved in shaping the plan, they know exactly what need to happen and what additional risks should be managed. We take the burden of your on our shoulders, allowing you to focus (or stay focused) on your core business

## Development

Any given solution is only as good as its implementation. For this reason, the same professionals work on your project from the consulting phase until delivery. This ensure that the work is done efficiently, with no information loss, and is of robust quality.
